

Learn Skills Driver's
Education Didn't Teach

Commercial driver's education courses teach the principles of road awareness and safety for prospective first-time drivers. They generally cover the "basics": Road signs and what they mean, principles of being a safe and responsible driver, how to operate a motor vehicle, traffic laws, and theoretically how to handle those emergency situations.

We take things a step further.....

Our one-day program combines classroom sessions with behind-the-wheel exercises. It's designed to help teens improve their ability to control a vehicle in both normal and emergency situations.

Founded in 1984, the Glacier Lakes Chapter was the home of Frank Beddor and is the charter member of the Audi Club of North America. Today, the chapter is comprised of about 300 members in Minnesota and North Dakota.

Our popular Car Control Clinics take place at Dakota County Technical College (DCTC). High Performance Driver's Education (HPDE) events are held at Brainerd International Raceway (BIR). Winter finds us practicing our ice driving skills on Cynthia Lake south of the Twin Cities. In addition to on-track experiences, our chapter offers members scenic cruises, picnics, and other social gatherings designed to engage spouses and families in all things Audi.

Real Driving Experience in a Controlled Environment with a Trained Instructor

Drivers learn how to handle their cars in various driving conditions and situations, while receiving coaching, encouragement, and praise from their trained instructor sitting in the passenger seat.

From slalom and skid pad exercises to braking and accident avoidance, we teach drivers in one day skills that likely weren't discussed or offered in their Driver's Education class.

Driver practices oversteer/understeer on wet skid pad

Goals

- Improve overall awareness of driving position and its effect on the ability to control a vehicle
- Educate on the physics that affect car handling, and how to use the physics to advantage
- Improve the ability to control a vehicle in
- All weather conditions
- Normal and emergency driving situations

Fun, Challenging & Eye-Opening

They know the laws, they've spent time behind the wheel, but have they faced a challenging situation yet?

Imagine blasting down the course and then braking hard enough, and at the right time, to stop in a space no bigger than the average garage. Or driving through a slalom course, feeling the car sway as the weight shifts from side to side. Then trying those challenges again on a wet course to learn what changes.

The most challenging (and fun!) may be the accident avoidance exercise. The driver has to do what is totally the opposite of what they might expect—stop in front of a green light—but not before changing lanes. It's difficult but rewarding when done correctly. A powerful lesson in how to react to the unexpected.

Registration Information

Cost is \$159 per student for ACNA members (& teens in their immediate family), \$189 per student for non-members

Clinics are held at Dakota County Technical College in Rosemount, MN

Clinics begin at 8:00 a.m. and end by 4:30 p.m.

Student Drivers must have a valid Driver's license or Learner's permit. (Parent/Legal Guardian must be onsite for the entirety for drivers under 18.)

Drivers use their own vehicle—good condition with valid insurance

Most street legal vehicles are allowed—any manufacture or model.
